Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

see separate sheet

AP20 RCG'd PCT/PTO 07 FEB 2006

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

PCT/NL2004/000561

#### Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

- 1. Independent claim 1:
- 1.1. Article 33(2) PCT:

The document D1: DE 31 49 589 A is regarded as being the closest prior art to the subject-matter of claim 1, and shows a winch system comprising a retaining device for a cable, comprising a drum 1 for containing at least two windings of the cable on the casing face thereof, said drum being mounted on bearings such that it can rotate, whereby the distance from the casing face of said drum 1 to the axis of rotation of said bearings varies around the periphery of said drum.

The subject-matter of claim 1 differs from this known winch system in that said winch system comprises a cable storage having a winding/unwinding drum separate from said retaining device.

The subject-matter of claim 1 is therefore new (Article 33(2) PCT).

### 1.2. Article 33(3) PCT:

The problem to be solved by the present invention may be regarded as being to provide a winch system with a compact cable retaining device which can be easily operated at different speeds.

The solution to this problem proposed in claim 1 of the present application is considered as involving an inventive step (Article 33(3) PCT) for the following reasons:

The cable is stored in D1 on a central cylindrical part 2 of the drum. The length of the storage part of the drum can be increased in case of an increased need for cable storage capacity (see Fig.8).

In order to solve the above-mentioned problem, the other cited prior art merely foresees to provide a further drum of different diameters on the same axis (see US-A-1 621 714 or also WO 01/30650 A, Fig.5).

### INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/NL2004/000561

A winch system, whereby the distance from the casing face of the drum to the axis of rotation of the bearings varies around the periphery of said drum and comprising a cable storage having a winding/unwinding drum separate from said retaining device, is not shown or suggested by the available prior art.

The subject-matter of independent claim 1 is therefore considered to involve an inventive step (Article 33(3) PCT).

2. Dependent claims 2-10:

Claims 2-10 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step (Article 33(2)(3) PCT).

#### Re Item VIII

## Certain observations on the international application

The embodiments of the invention shown in figures 1 and 2 and the corresponding parts of the description do not relate to a winch system comprising a cable storage having a winding/unwinding drum separate from the retaining device and therefore do not fall within the scope of the claims. This inconsistency between the claims and the description leads to doubt concerning the matter for which protection is sought, thereby rendering the claims unclear, Article 6 PCT.
